According to NASA, “in terms of mass, a nanosat or nanosatellite is anything that weighs between 1 and 10 kilograms”. Satellite types according to mass: Large satellites: More than 1,000 kg; Medium-sized satellites: 500-1,000 kg; Small satellites: Minisatellite: 100-500 kg; Microsatellite: 10-100 kg; Nanosatellite: 1-10 kg;

While all such satellites can be referred to as "small", different classifications are used to categorize them based on mass.

Satellites can be built small to reduce the large economic cost of launch vehicles and the costs associated with construction. Miniature satellites, especially in large numbers, may be more useful than fewer, larger ones for some purposes - for
